Elvis

Growth: Elvis has gained 90g in 1 month!
Last report weight was 410g and he is now 500g!

Diet: Elvis is drinking 10-15mls goat's milk 5 times a day and is offered cooked veggies and wild leaves throughout the day. This month I started moistened puppy chow to help him gain weight.

Health: No health problems this month...but I have been concerned that he isn't gaining weight fast enough. He has always been small but he's a dainty eater as well so I started moistened puppy chow and so far he loves it!

Behavioral: Elvis is more confident than Bruno and continues to explore more than Bruno. They both play together frequently and are becoming more nocturnal.

Recent Milestone: Both Elvis and Bruno are now able to hang upside down while eating and holding their own food!

Future Goals: Continue to increase amount of solid food eaten on own, gain weight...continue to practice climbing outside of the basket and work on potty training.
